

EVENT SETUP

- **Events** with title, banner, location, timezone, public slug
- **Tiered tickets:** GA, VIP, group, paid + free, sale windows, inventory
- **Agenda:** tracks, sessions, speakers, per-session live stream URL
- **Media uploads** to Cloudflare R2 via signed URLs with server-side size cap
- **Multi-org:** one user, many organizations, isolated payments + branding

Registration + checkout

- Public event pages at **orkora.events/e/<code>**, no account required
- Free registration with instant confirmation; paid checkout via Stripe / Paystack / Flutterwave
- Per-event provider auto-routes to the right one for the buyer's currency
- Confirmation email, tap-to-open ticket QR, PDF receipt for paid orders
- Idempotency on every surface so a flaky network never double-charges

ON THE DAY

- **Check-in** via phone camera; validates the signed QR, prevents reuse
- **Live attendance:** 60-min chart, registered vs checked-in, active sessions
- **Live updates:** push announcements to every attendee viewing the event page
- **Join live** CTA appears the moment a session is in window
- **PWA on every device;** ticket QR works offline (service worker cache)

Payments + money

- Multi-currency: **USD, NGN, GHS, KES**
- Refunds initiated by organizer, verified by provider, reconciled by scheduled sweep
- Per-order PDF receipt, emailed at payment + on refund
- Audit log: refund, role change, admin action, with actor + reason + request id

IDENTITY + ACCESS

- Sign in by **email + password, magic-link, Google, or Apple**
- Per-account exponential backoff + per-IP rate limits
- Refresh-token rotation with replay detection (leaked token revokes the family)
- Org roles: owner, admin, manager, scanner; platform super-admin for staff

Security posture

- TLS, HSTS, strict CSP with per-request nonce, helmet, CSRF on refresh
- RS256 JWT with **kid-based rotation**, argon2 passwords, peppered refresh-token hashes
- Tenancy isolation enforced server-side and tested on every push
- Continuous audit: deps + secrets + bundle leak + transport + API authz + ZAP

Partner API

- REST under **/v1**; JWT or scoped API key (ork_...)
- Verified, idempotent webhooks for Stripe / Paystack / Flutterwave

STACK

NestJS API on Render · Postgres on Neon · Next.js web on Vercel · Expo mobile · Cloudflare R2 · Postmark email · Sentry

STATUS

Private beta. Public launch following counsel review + final security harness wiring.
© Orkora · orchestrating every moment.

How it's used

DAY ZERO

Set up the event

Sign up, create the org, create the event, add tiers + agenda + speakers, publish. The public page is live.

DAY-OF SALE

Sell tickets

Attendee land on the public page, pay in the currency. Organizer watches revenue, registrants roll up live on the dashboard.
