

Orkora

Orchestrate every moment.

An explainer for event organizers

How one platform takes your event from idea to sold out to checked in.

What is Orkora?

Orkora is a single system that takes an event from "we should run something" through to "we ran it", without stitching together a registration tool, a ticketing tool, a check-in tool, a payment processor, an email tool, a chat tool, and a spreadsheet. You get a fast browser dashboard, a public event page for attendees, an installable mobile app for on-the-day operations, and payments that settle in the currency you actually sell in.

Sell in USD, NGN, GHS, and KES side by side.

Checkout auto-routes to Stripe, Paystack, or Flutterwave per currency. Naira and cedi are not afterthoughts.

Built for organizers who handle money

Orkora is not aimed at free meetups. It is built around the constraints that matter when tickets cost real money: settlement currency, refunds, reconciliation, tax-ready receipts, and a dashboard that tells you where the cash is.

Corporate conferences

Paid tracks, multiple ticket tiers, group buys, and clean revenue reporting.

Industry summits

A polished public page, real-time attendance numbers, and a fast check-in flow at the door.

High-value private gatherings

Registration page, ticket email, and door experience that all feel as premium as the event.

Everything in one place

- **Registration + checkout.** Public event page, free and paid tiers, group tickets, hosted checkout, instant email confirmation with ticket link and PDF receipt.
- **On the day.** QR check-in from any phone camera, live attendance counters, in-app announcements, "Join live" session CTAs, offline-capable attendee tickets.
- **Money.** Multi-currency settlement, one-click provider-verified refunds, PDF receipts, an audit log for every action, scheduled reconciliation sweeps.
- **Engagement.** Live chat per event with moderation, speaker pages, polls and Q&A; on the roadmap.

From idea to checked-in, step by step

1

Sign up + create your organization

ORGANIZER

Sign up at orkora.events/signup with email + one-time code, Google, or Apple. Create your organization: name, currency mix, brand colors. One account can run multiple organizations.

2

Build the event

ORGANIZER

Create the event: title, dates, timezone, format, public URL slug, banner. Add ticket tiers (free, paid, group) with sale windows, per-order caps, and inventory. Add tracks, sessions, and speakers if you run a program.

3

Publish + sell

ORGANIZER > ATTENDEE

One click publishes your public page at orkora.events/e/<code>. Attendees register with no account required and pay via the right provider for their currency. Each buyer gets a confirmation email, a tap-to-open ticket, and a PDF receipt.

4

Watch it fill up

ORGANIZER

The dashboard shows real-time revenue by currency, registrations by tier, top referrer sources, and daily rollups while tickets sell.

5

Run the day

ORGANIZER + DOOR TEAM

Door staff (with the scanner role) point a phone camera at each attendee QR: valid tickets tick the live counter, reused tickets warn, refunded tickets are voided. Push announcements to every attendee, watch the rolling attendance chart, and let "Join live" CTAs appear as sessions start.

6

Settle, refund, export

ORGANIZER

Issue one-click refunds through the original provider; the attendee is emailed and their QR voided automatically. Export attendees, orders, and check-in records as CSV. Archive the event to keep the page reachable and stop new registrations.

A door experience that matches the ticket price

- **Register in under a minute.** The public page has the agenda, tiers, and registration inline. No account needed to buy. Group purchases capture every attendee's details.
- **Pay in their currency.** Checkout is hosted by Stripe, Paystack, or Flutterwave based on the event currency. The price you set is the price they pay: Orkora adds no attendee-facing fees.
- **A ticket that works at the venue.** Confirmation email with a tap-to-open ticket and PDF receipt. The ticket QR is cached offline in the installable web app, so dead venue wifi cannot strand anyone at the door.
- **A live event, live.** In-app announcements, live chat with moderation, and "Join live" buttons the moment a session starts.

Why organizers can trust it with money

PCI DSS Level 1 payments

Card data is handled by Stripe and Paystack. Orkora never touches a card number.

No double charges

Idempotency on every payment surface, so a flaky network never produces a duplicate charge.

Refunds that reconcile

Provider-verified refunds, a scheduled reconciliation sweep that catches missed webhooks, and a re-check button for stuck cases.

Every action on the record

Refunds, role changes, and admin actions logged with actor, timestamp, and reason.

Role-based access

Owner, admin, manager, and scanner roles per organization. Door staff can scan without seeing your revenue.

Your data is yours

Attendees, orders, registrations, and check-in records export at any time. No lock-in.

Free events are free. Forever.

- ✓ **Free events cost nothing, ever.** If your event sells \$0 tickets, Orkora charges you nothing. Forever.
- ✓ **Paid events: no Orkora fee during beta.** Unlimited paid events with no Orkora platform fee while the product is in beta. Beta organizers get at least 60 days written notice before any per-ticket fee is introduced, with the exact rate and a 30-day grace period for already-published events.
- ✓ **Payment provider fees pass through at cost.** Stripe, Paystack, and Flutterwave fees are paid at the provider's published rate. Orkora does not mark them up, and the full breakdown is shown on every order.
- ✓ **No surprises for attendees.** The tier price you set is what the attendee pays. After general availability, any Orkora fee comes out of your settlement, not on top of the ticket, unless you choose to pass it on.

Get your first event live today

- 1 Sign up at orkora.events/signup (email code, Google, or Apple - about a minute).
- 2 Create your organization and your event; add at least one ticket tier.
- 3 Publish, and share your public link: orkora.events/e/<your-code>.
